TRIGGE, 1677.

An Astrologo-Physicial Discourse.

THat the pro-dominion of humours, is the immediate cause of diseases; and that the excitation of these humors, is caused by the various and different Aspects and Positions of the Stars is even by Hippocrates and Galen themselves confirmed. Trust we then to these Rules Astrological, to be observed for the advantage for the sick;

Let the	{	Sanguine	{ bleed the	{	♄, or ♀.
		Cholerick			♅, or ♄.
		Phlegmatick			♆, or ♀:
		Melancholy			♁, ♀, or ♄.

being in

But let her be also in the Aspect of the Fortunate Planets, and seated in a fortunate part of Heavens

It is good to purge with Eleaguaries, when the ☾ is in ♅; with Pills, when she is in ♄; with Potions, when in ♄, because then posited as before directed.

Vomits are unsafe for all sorts of complexions and constitutions; yet sometimes there is a necessity for them; as when the Distemper lyeth above the stomach; it being impossible for a Purge, or any purgative Medicine thence to carry it; but when there is an occasion they may be safely taken when the ☾ is in ♄, ♀, or ☉. in any good Aspect of ☉, ♀, or ☉.

Glysters are most conveniently administred, when the ☾ is in ♄, ♀, or ♀. posited as before.

Good to stop Fluxes, or Rheumes, or Issues, when the ☾ is in any of the Earthy Signs, viz. ♄, ♀, or ♄; of which experience is a valuable witness.

Very proper to Bath, when the ☾ is in ♅, ♁, ♀, or ♄, in Aspect of ☉ or ♀.

Convenient to cut Hair, the ☾ being in ♁, ♄, ♀, or ♄, increasing in Light. And although this be in the opinion of many but a Trivial thing to observe; yet were it more taken notice of by the Gallants of our times, they need not disguise themselves with Venus Locks; But they, it may be, esteem it an Honour to be made amends with a part of her, that Originally injured them.

Medicina a medico; medela ab altissimo.

TRIGGE, 1677.

Of the Four Seasons, and Eclipses this year, 1677.

1. Of the Spring.

THE Spring is a Season Hot and Moist; the most Pleasant time of the whole Year, and agreeable to the Sanguine Complexion, and to Man-hood in humane Generation. All things flourish now, and (possibly) almost as much before their wanted time, as they did the last Year. Saturn is not in a Signe of this Season for nothing. The Days begin to exceed the Nights in Length. This glorious Season begins in this Year, on *March*, 9 d. at 9 h. 26 l. afternoon; and continues all the time the Sun passeth through γ & II. \square

2. Of the Summer-Season.

AT what time the Spring ends, Summer begins; and this Year happens on *June* the 10th, a little after Midnight: It continues all that time the Sun passeth the Signes of \mathcal{S} , \mathcal{Q} , and \mathcal{R} . It is a Season Hot and Dry, resembling Choler: the Dayes begin now to shorten, and the Sun himself to decline from us. The Fruits of the Earth now Ripen apace, for the advantage of Man-kind in the ensuing Year. \mathcal{S} fills them; \mathcal{Q} gives them spirit and vigor; \mathcal{R} kindly dries them for Humane use: And who is he now that dares call \mathcal{R} Barbarous? Must not he be Barbarous and Brutish too, that thus confidently impeacheth it.

3. Of the Autumnal and Harvest-season

THIS Quarter begins where the Summer ends; and this Year happeneth on *September* the 12th. between 4 and 5 in the afternoon. It is of Nature Cold and Dry, and assimilated to Melancholly among the Humours. Now the Fruits of the Earth are gathered, and the Countrey-man meets a happy Seed-time for his Corn, to encourage his Hopes of the ensuing Year. The Nights begin to exceed the Dayes in Length; and the Sun begins to hasten toward his Southern Tropicke.

4. Of the Winter-Season.

WHEN the Sun enters Capricorn, the Winter-Season begins; and this Year falleth on *December* 11th. at

TRIGGE, 1677.

4 in the Morning, and continues all that time he is transiting the signes of ν , π , κ . And so the Sun having finished his Course, he begins in *Aries* the Spring for the ensuing Year. This Quarter is Cold and Moist, and resembled unto Phlegm among the Humours, and to the decrepit Age of Man-kind. Young People are now most Healthful; Old Folks the most sickly. The Weather is bad & unpleasant, by reason of the Suns absence: And this shall serve to befaid of the Four Seasons of the Year; wch. *Ovid* most witley comprehendeth in this *Dystich*

*Poma dat Autumnus, formosus rießibus Æstas,
Ver probat Flores, Igne levatur Hyems.*

Which may admit of this *English*;
The Spring gives Flowers; Summer Harvest brings;
Autumne yields Fruits; Winter consumes all things.

Of the Eclipses of the Sun and Moon, which bappen in this Year, 1677.

Four times will the Inhabitants of this Earthly Starr have the Luminaries Eclipsed from their sight; twice the Sun & twice the Moon; and they happen in the following Order.

The First will be an Eclipse of the Moon, on *May* the 6th. day, 15 P. M. in 27 Degrees of *Scorpio*: It will be a little (and but a little) Visible unto us; for that the Sun Riseteth before the Eclipse be ended. It will appear a great Eclipse in the *Caribbee Islands*, and in *Jamaica*; where above seaven parts of the Moon's Body is obscured. *Scorpio* is a signe of the Watery Trigon; and perhaps some Earthquakes and Hurricanes may happen near these times, in the *West-Indies*, as there did on *August* 31. 1675. in *Barbadoes*.

The Second Eclipse will be of the Sun, on *May* 21st. about our Ten of the Clock in the Morning, in 10. Degrees of Π . And although it be invisible, yet I am sorry to find it there; because Eclipses in Π , have never been the Prodromy of any Good to *London*, or *England*.

The Third will be an Eclipse of the Moon, about one a Clock in the Afternoon with us, on *October* the 13. day, in 16.

De.

TRIGGE, 1677.

Degrees of 8. This is an invisible Eclipse; and I will not say its Effects shall be seen in Ireland; but assuredly they will be felt there, and that Remarkably: It will be seen in our Antipodes, and in sundry other Places; as any one may read in Gadburie's Ephemerides of this Year.

The last Eclipse will be of the Sun, on November the 14. neer our Midnight; and therefore, not visible in any part of Great Brittain; But to those that inhabit the Southern Hemisphere, it will appear a very great Eclipse. It is Celebrated in the beginning of Sagittarius, near unto the Heart of the Scorpion. Thus much for the Eclipses of the Sun and Moon in this Year.

Of the nimble Planet Mercury, his severall tedious Transits this Year, 1677. And of the Fight of Birds near Dole in Burgundy, last Year.

BESIDES the several Eclipses of the Luminaries, this Year there happens three miraculous Transits of the nimble Planet Mercury; all of them in the Watery Triplicity, viz.

1. The First of them is on January the 28th. in the Cælestial Fishes; and continues there from that time, unto the 5. of April following: neer nine Weeks.

2. The Second is in Cancer; from May the 21. to July the 31. following: above ten Weeks in time.

3. The last of them is in the Cælestial Scorpion; from the 27. of September, to November the 27. following: a time almost as long as either of the other two.

I want room to descant upon the Effects or Significations of these unusual Transits at large: Only I will tell you, that Mercury, though he is a small Planct, he is the Author of great Designs; and he can sometimes disturb and trouble Nations, Kingdoms, and Countreys; as well as Families, Societies, or single Persons: And he making this Majestical Progress in the Watery Triplicity, intimates more various Disturbances and Discontents than ordinary: *Many Waters. Many Troubles.*

T R I G G E, 1677.

It were no difficult matter to acquaint you with what we had such *Mercurial* Transits formerly: It is but revolving your past Ephemerides of *Origanus*, *Stadius*, *Stoffler*, &c. and they will readily inform you of them. We live in an Age of Prodigies; and Heaven and Earth both, have not been wanting to afford us Examples hereof; and I could enumerate good store of them, which have happen'd of late Years, and even in these Countries too, if occasion served, or that I had room to do it. But that eminent and famous one, of the Congregation and Fight of Birds, near *Dole* in *Burgundy*, shall serve for All; Which be pleased to take in the Words of the *Lou-don-Gazet*, as followeth: —

From *Dijon*, *March 1.* We have had of late much talk here of a great Fight of Birds near *Dole*, which was told thus; — That on the 26th. past, about Nine in the Morning, were seen between *Dole* and *Salines*, a most incredible number of Birds; who, by their Multitudes, darkned the Sky. After, having for some time skirmished (as it were) together in great Confusion, they separated into two Bodies; and after most horrible Cryes, they engaged against each other with such Fury, that several thousands have been found upon the Earth; some smother'd, with most of their Feathers off; and others, all Bloody and Torne. These Birds were of 100. several Sorts, of several Colours, and several Sizes: Those which were most numerous, weighed 4. or 5. pounds; Their Claws were like those of *Indian Hens*; Tibbs crooked like *Parrots*; and their Feathers of an *Ash-Colour*. About 500. Paces of Ground were cover'd with those Dead-Carkases, to a Man's Height; besides several Thousands that were found dispersed here and there: Inasmuch, that it being feared, that the Air might be infected by them, *Pioneers* have been sent from *Dole* to bury Them.

Lycosthenes, and *Bateman*, and divers others, give notice (among other Prodigies) of several Stories of Birds; but scarce any like unto this. Such like Prodigies as these, do plainly inform us, That there is some-what more intended by them, than to shew us barely; --- That *Passions*, *Affronts*, desire of *Empire*, *Marshal-Discipline*, &c. are to be found Regnant among those *Aerial Inhabitants*. Surely the God of Prodigies is angry at the sinful Actions of Man-kind; and seems to give us Notice, how he intends to deal with the World, from the

TRIGGE, 1677.

Example of these Birds Destroying and Ruining one another.

But that, which is as Prodigious as all this, is, that that Illu-
minate Man, *Mitchael Nostradamus*, is thought to have Pro-
phesied of this Aereal Conflict, in his last Quadrin of the
First Century: which, for the rarity of such a Prefage, I shall
here present you withall: viz.

*Long Temps au Ciel Sera venu gris Oiseau
Aupres de Dole, & de Tuscane Terre,
Tenant au Bec un Verdoyant rarnen,
Mourra tost Grand & finira la Guerre.*

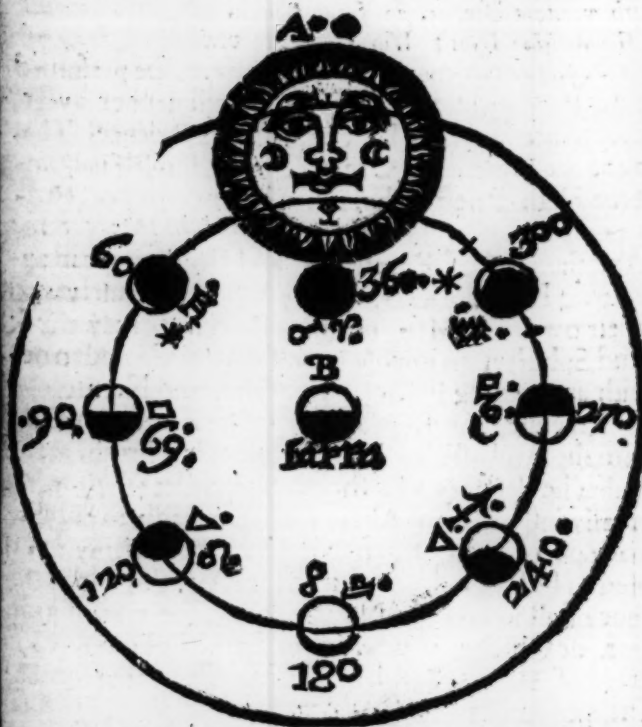

Which sounds to this Effect in English;
When gray Birds long in th' Air are seen,
Near Dole and Tuscany t' have been,
With verdant Boughs, in fatal Beaks;
A Great Man Dyes: Warre ends to vex.

Whether *Nostradame* may from this passage, be presumed
to fore-see the Prodigy under Discourse, I will neither averr,
or yet deny. Since we find by common Experience, That
a Man may be the Oraculous Organ of what himself is igno-
rant: As the High-Priest, who, when he knew it not, Pro-
phesied, --- *It was necessary that the Man should Dye for the*
People. And the God of Prophecies, and Prodigies, can ap-
point Men to do His Work, when they believe themselves to
be about their own. A Man, meaning Mischief, may think
by Craft and Subilty, to impose upon the World, and to de-
fraud it with an ambling Fallacy; But God, and Nature, can
so far over-Rule the Horoscope of his various intentions, as
to make him the Ambassador and Servant of his Truth, at the
same time that he designs a Falshood. So that, let *Nostradamus*
be either really inspired from Above, or pretendedly so only; he
may be made use of as an Organ of the Worlds Destiny; and
so appointed to be by God, who made the World, and is the
true Author of all its eminent Notices, and Fore-warnings of
Alterations, or Changes; whether in Law, Religion, Go-
vernment, or of Wars, Pestilence, Famine, &c. that shall at
any time happen among them. --- And thus *Cornelius Agrippa*,
(whom *Franciscus Junctinus* styles, --- *Vir fabulosus, & autor*

TRIGGE, 1677.

nova Doctrina absurda ac prestigiatrix, &c.) hath been the Instrument and Conveigher to the World, of a great many excellent Verities, among his larger Troops of Vanities and Trifles. But I pass this Discourse of the portents of Prodigies, leaving time to interpret all things more fully, than it is fit for me to pretend unto; and so I come unto something Mathematical that may qualifie my ingenious unletter'd Reader: and that shall be —

A Demonstration Ocular of the MOONS Receiving her Light from the Sun, and how she looses it again, and by what Geometrical Distances; and how the Sun & Moon come to be Eclipsed

In this Diagram, A. ☉. represents the Sun; & ☾. the New Moon, viz. when she is in Conjunction of the Sun, and is wholly void of Light.

II. *. & ✱. denotes the Moon Corniculata, or in a Sextile Aspect of the Sun.

☾. ☐. and ☾. ☐. shews the Moon Dimidiata, or half full of Light; and expresses

and ☾. ☐. shews the Moon Dimidiata, or half full of Light; and expresses

TRIGGE, 1677.

espress her in her First and Last Quarters from the Sun, viz. the dexter and sinister Quadrates.

☾. Δ. and ♀. Δ. Represent the Moon Gibbosa, or three Parts full of Light; and serves to delineate her in her trine Aspects from the Sun.

☾. ♂. declares the Moon *Tota Illuminata*, in *opposito Solis*, viz. to be at the Full, or wholly illuminated, and in an exact opposition of the Sun.

The word *Terra*, and letter B, represent the Globe of the Earth, about which these several appearances of the Moon are seemingly (according to common Vision) made.

The several Figures between the two Circles shew the Moons Ecliphtical distance from the Sun in her several Faces, viz. 60 her Sextile sinister. 90 her Quadrate sinister. 120 her Trine sinister. 180 her Opposition. 240 her Trine Dexter. 300 her Quadrate Dexter. 360 the New-Moon again, or her Conjunction with the Sun, after so many curious figured Distances.

Hence also you may Learn, how the Eclipses of the Sun and Moon are made: For, the Eclipse of the Sun is nothing but the Interposition of the Moon, between the Sun and Earth: And the Eclipses of the Moon, is the Earths Interposition, between the Sun and her Body; as the Scheme fore-going Demonstrates.

As for example; Let A. ☉. represent the Sun, and ☿. ♀. the New-Moon; and B. *Terra*, the Earth whereon we Live. Now, an Opacus Body (as is the Moon) in ☿. ♀. must needs hinder the Light of the Sun, who is posited in A. ☉. from falling upon a Body in B. *Terra*: Because the Body in ☿. ♀. interpoles in a right Line, between a Body in A. ☉, and B. *Terra*; and must therefore be said to eclipse, or intercept the Light of A. ☉, from B. *Terra*: And thus an Eclipse of the Sun is made.

The Eclipse of the Moon is made thus: Let ☾. ♂. represent the Moon at Full; and A. ☉. the Sun, as before; and let B. *Terra* represent the Earths Body. Now, the Earth (being placed between A. ☉. the Sun, and ☾. ♂. the Full-Moon) takes

TRIGGE, 1677.

takes away the Light of A. ☉. or the Sun, from $\mu. \odot$. or the Moon; and so leaves the Full-Moon Eclipsed.

Where you are to note, That the Sun cannot be Eclipsed, but at a New-Moon; nor can the Moon be Eclipsed, but at a Full-Moon: And you must also observe, That the Sun cannot be Eclipsed every New-Moon; neither yet can the Moon be Eclipsed at every Full-Moon; by reason of the Moons Latitude, either North or South, from the Ecliptick Line; which commonly puts her beyond the limits of Luminarian Obscuration.

And were not this so, we should have an Eclipse of the Sun, and another of the Moon, every Month, viz. as often as the New-Moon, or the Full-Moon came about: which every one (but meanly versed in the *Mathematicks*) knows, cannot be.

Thus much therefore shall serve to be said upon this occasion, and also for this Year of 1677. I will conclude All in those pithy Verses of that worthy Gentleman, Capt. *George Wharton*: which Verses I find often made use of by brutish Plagiaries, without once mentioning of that Learned Persons Name, viz,

Mend (Gentle Reader) what escapes amiss,
And then it matters not whose Fault it is;
For, all Men sin, since Adam first Transgress;
The Printer sin's, I sin much like the rest:
Yet here our Comfort is, though both Offend,
We to our Faults can quickly pen ———

AN END.
